ONE OF THE NEWEST EVERBEARING STRAWBERRIES

18 Berries Known to Fill a Pint Box

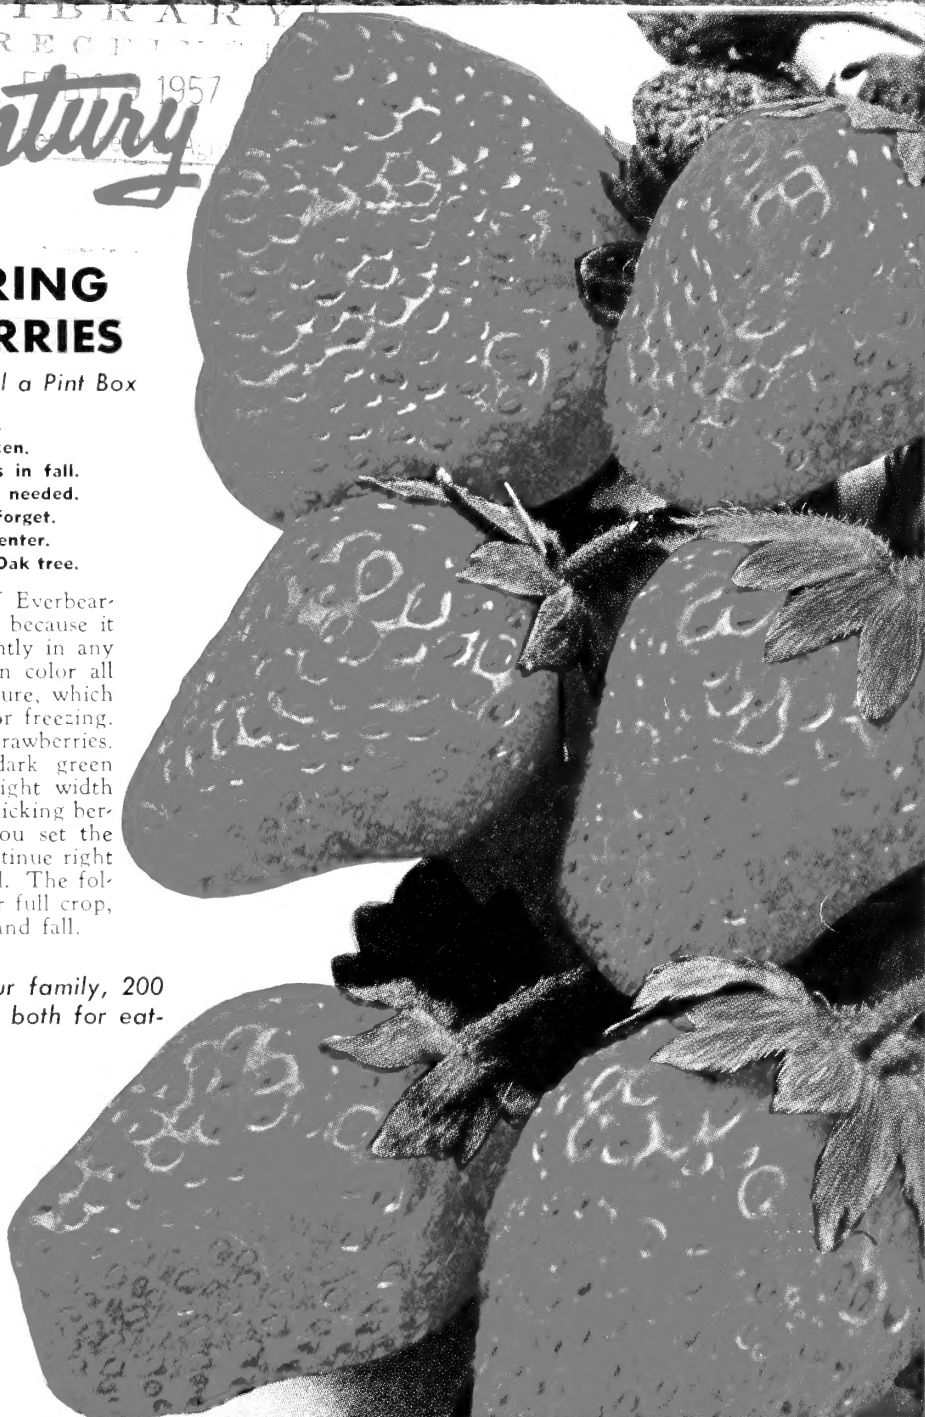

- Bears fruit in 60 days.
- Excellent fresh or frozen.
- Bears till heavy frosts in fall.
- No special soil or care needed.
- A flavor you'll never forget.
- Bright red color—to center.
- Hardy and hale as an Oak tree.

We like 20th CENTURY Everbearing Strawberries best of all, because it grows and bears so abundantly in any type of soil. Brilliant red in color all the way through. Firm texture, which makes it ideal for canning or freezing. One of the sweetest of all Strawberries. Plants grow strong, with dark green leaves and make just the right width fruiting row. You can start picking berries within 60 days after you set the plants in the spring, and continue right up to heavy frosts in late fall. The following June you get another full crop, and then again all summer and fall.

If there are five in your family, 200 plants should be enough, both for eating and freezing.

MASTODON

EVERBEARING

*Bears 60 Days
After Planting*

Mastodon has been with us for about 20 years, we have never known them to fail on a full crop five months long. The very large berry is of very good quality, red all the way through, and fine flavor. Bears heavily and makes many new runner plants. These new runner plants will also bear toward fall, and then you have a real picking row. This wide row will make fine picking next June as a spring berry. Mastodon does not require any special soil, care or petting. It will take a hard freeze to stop Mastodon from bearing. A field of Mastodon in full bearing in late November is a sight never to be forgotten. Even after a light snow one can go out and find ripe berries unharmed.

GREAT EARING BERRIES

Red Rich

RED RICH is Plant Patent No. 993. RED RICH is a hybrid everbearing variety, and is the result of over 15,000 seedlings. It's the largest, thriftiest growing Strawberry, and is the result of over 15,000 seedlings. It's the largest, thriftiest growing Strawberry.

RED RICH is the best everbearing variety of the day by University of Illinois tests. They say: "Of the 29 everbearing varieties we tested here last season, RED RICH is by far the best." Signed, Herschel L. Boll, Assistant in Pomology.

Dr. Leon C. Snyder, Extension Horticulturist of the University of Minn., reports that RED RICH produced 60 quarts on a triple row hill system.

RED RICH is unsurpassed as a freezing berry. Firm and deep red clear through, does not mush up when thawed out. Being honey-sweet it requires little sugar.

RED RICH is a large, rugged plant. Twice the size of any other Strawberry plant. Bugs and disease don't seem to like it at all. Starts to bear 60 days after set out and never quits till late in the fall. Red Rich will produce 3 crops in 18 months. As a dessert berry it has very high quality, honey sweet. Extra large and deep red all the way through. The large size of Red Rich is maintained throughout the bearing season.

SENATOR DUNLAP

June Bearing Variety—Over
50 Years Old but Still Good

Senator Dunlap is an old well known variety that has made more dollars for berry growers than any other variety. It will grow most anywhere and on any kind of soil. However, it will do best on heavy, rich soil. If planted on light soil, be sure to set them 2 feet apart. On heavy soils set them 18 inches apart. Berries are dark red, firm and sweet. Wonderful for canning and freezing as well as fresh.

This variety was introduced several years ago by the New York Experimental Station. Catskill and Robinson are two of the finest late Strawberries. They follow Premier and Dunlap. Berries are extra large and smooth. The last ones that you pick from the thick, stiff fruit stems that stand upright with a full load, will be nearly as large as the first ones,

Catskill

and just as smooth. We do not have a more beautiful berry to offer. Mild and nearly non-acid. Folks who are bothered with Strawberry rash tell us they can eat Catskill. Catskill will do fine on any type soil, but does the very best on a heavy clay loam, and fine on a stiff clay soil.

New ROBINSON

Largest June-Bearing Strawberry Known

HIGHEST QUALITY. These big round blunt-pointed berries are of top quality. They are borne on large thick fruit stems, that are protected with heavy foliage that makes up a wide fruiting and picking row.

The tangy, rich, sweet flavor is found in no other Strawberry. ROBINSON is the largest berry we have to offer. It's late—starting to ripen about the time Premier is finishing up. By planting Premier for early and Robinson for late, you will have fresh fruit from start to finish, over a 30-day period. Berries have a firm skin, and are solid all the way through, making it a good shipper as well as a good home use variety. You will like Robinson.

THE EXTRA EARLY BLACK RASPBERRY

This new Black Raspberry was introduced by us 3 years ago. It's a chance seedling, since it was found growing wild. It was taken up and cultivated because we noticed that the berries were ripe and ready 2 weeks before any other variety, so that is the outstanding feature of MORTGAGE LIFTER. Berries are medium large, sweet as honey, and firm. If you plant only a few in your garden you will have the first ripe berries in your neighborhood. If you plant them for market, then you will really "clean up," since it's always the first ones ripe that make the money. It's a real mortgage lifter.

New CANBY Red Raspberry

This new Raspberry was developed at the Oregon Experiment station, a seedling of the cross of Viking Lloyd George. We fruited the Canby for the first time this year, and find it to be the largest and best Red Raspberry we have ever seen in our 60 years of fruit growing. Canes are completely FREE OF THORNS making it easy to pick the fruit. Berries are a bright, medium light red, exceptionally LARGE in size and very thick-meated with small core; distinct Raspberry flavor, with far less acid than most Red Raspberries, making it an ideal dessert berry. A superior variety for long distance shipping because of its outstanding firmness. An exceptionally vigorous grower, with large stocky canes. Commands highest prices, for it is early ripening. Here in Michigan, it ripened the last week in June. We believe it is going to take the place of all Red Raspberries for home or commercial purposes. Price: 1-Yr. No. 1 plants, 6 for \$1.75; 12 for \$3.00; 25 for \$5.00. LESS DISCOUNTS.

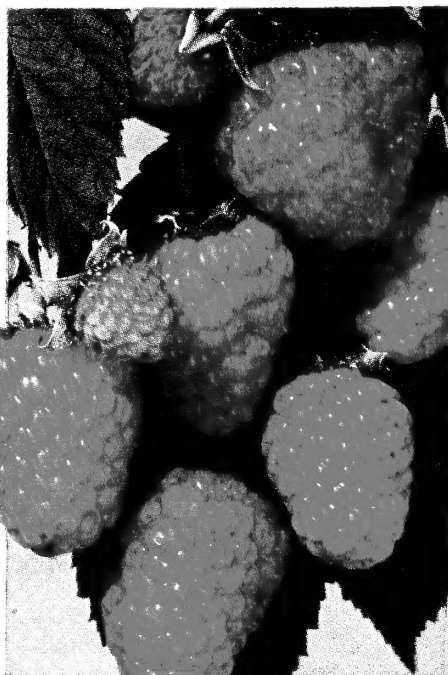

LATHAM Red Raspberry

The Commercial Growers' FIRST CHOICE

Latham grows anywhere on most any type of soil, and so hardy that it will stand 45 degrees below zero. Latham berries are large, often an inch in diameter. Best all-around berry to grow. Cans well, and fine for freezing. Holds the load of fruit well. Latham has that old-fashioned real Red Raspberry flavor lacking in so many other varieties. Set Latham plants 3 1/2 ft. by 7 ft. apart. March, April and May are the best planting months. Plant soon as ground can be worked. 25 plants will plant a row 85 feet long, and plenty for average family.

Stromer's

EASY TO GROW. Each year as we learn more and more about growing the **HYBRID** cultivated Blueberries, we find that they are not near as fussy about what kind of soil they will grow on, as we did a few years ago. Of course they prefer a rather moist acid soil, but we also find that they will grow on other soil too, by adding some peat moss, old leaves or sawdust with the soil. Sulphur and water them well during dry spells.

The Cultivated Blueberry is a rather **DWARF** growing plant. A plant 15 years old will not be over 6 feet tall, but it will be the same size in circumference. They grow in a ball shape plant, and their roots are all very near the top of the soil, so they must be cultivated very shallow. Set the plants 5 feet apart each way, and keep clean by frequent cultivation. Hoe all weeds away from the plants. We offer 2-yr., 3-yr., 4-yr. and 5-year-old plants. All of these sizes have some buds. You can expect 2 to 6 quarts of fruit from a 5-year-old plant the year after set, when it becomes well established. Even the 3-year-old plants will bear some fruit the same year set.

Hansen BUSH CHERRY

The New Quick-Bearing Cherry. EASY TO GROW—SURE TO PRODUCE. Highly Productive—Good Flavor—Hardy Everywhere.

Though the fruit of this new Cherry much resembles a Plum in size and shape, it comes massed in clusters and at times almost completely covers the limbs. The tree grows in a dwarf bush-like shape, rarely getting over 4 or 5 feet tall. Also of striking ornamental value.

Plant Hansen Bush Cherries Because:

1—They are so easy to grow and are perfectly hardy everywhere.

2—Are good to eat fresh, and make delicious preserves.

3—Bear from the ground up, early, heavily, and annually.

4—Are dwarf growing, bushy, and take up little room.

5—Excellent for hedges, ornamental shrubs and erosion control.

WASHINGTON ASPARAGUS

There is no variety of Asparagus as good as Mary Washington, and whether for home use only or for market, you cannot afford to grow any other. This wonderful new Asparagus was developed and introduced by the U. S. Department of Agriculture, and although a recent introduction, it has become famous the country over.

Growers everywhere are discarding all other varieties in favor of Mary Washington, because it is earliest, the stalks are larger, more tender, more productive than any other variety.
